I hope you enjoy your new collar. I make them specifically for IGs. You'll find the collar is designed to expand and slip over your dog's head and then cinch up snuggly and Velcro closed. The Velcro closure is very effective and your IG won't be able to pull it apart, as it connects on the inside of the collar and is protected from abuse.

The Velcro pieces on the collar are sewed down, with enough extra to allow for collar size adjustment. To adjust the size or snugness of the collar, simply line up the pads at the desired point and press the Velcro ends together

1. When putting the collar on your IG, slide the collar open as far as it will go without pulling the end tab out.
2. Slide the collar over your IG's head and onto the neck.
3. The end of the collar (the Velcro hook end) will be against the neck, **not** on the outside.

4. While holding the collar in place, pull the end tab of the collar back on itself against the neck and towards the Velcro loop pad half way back on the inside of the collar.
5. Continue to gently work the collar tighter by massaging it as you line the two Velcro pads up and secure them.
6. When they are matched up properly you should not see the end that lies against the neck, it will appear to be one seamless line.

Make sure the collar is not too tight or too loose. The collar should fit against the neck, but you can slip your finger between the collar and the neck without pinching, or pull a small loop at the black slide. The collar should **appear** snug, but is not tight against the neck. If the collar does not fit properly, separate the two pieces of Velcro and tighten or loosen the collar, then press them together again.

The d-ring is where you attach your leash, though it will naturally slide around to the front of your IGs neck when they do not have the leash attached. We normally attach our tags to the ring on the slide. Some of our customers like to attach their tags to the d-ring. Either choice is correct.

Enjoy the Collar!!
